Plush BREATHEABLE sides*

Dual Tempered Bonnell

Active Technology

High Tech

Pre Set

6 Turn Bonnell

Double Knot

Open cell technology

Knitted Ticking

Hygienic & Non Toxic

Dual Sided

BENEFIT

Copper Interpolated Gel Foam combined with luxurious moisture-dispersing Hyper Soft Blue Bead polyurethane layers enhances sleep quality. It improves magnetic fields, regulates temperature, detoxifies through magnetic alignment, acts as a thermal conductor, and reduces inflammation, while offering a comfortable yet supportive plush top and bottom layer.

The Bonnell spring units are both heat and electronically tempered for more rigidity and to ensure a minimal compression set.

The springs are hand packed with the knots facing each other to eliminate any tilt on the spring unit.

The HIGH TECH Bonnell unit allows for an additional row of springs.

The Bonnell unit is compressed flat to eliminate initial sagging in a mattress.

A six turn BONNELL has 33% more working wire than a five turn spring.

The Bonnell springs are knotted at the top and bottom to avoid knot slipping.

Polyurethane Foams are manufactured with an open cell structure which allows for ventilation ensuring an ultra hygienic sleep environment.

The soft touch jacquard ticking is micro-quilted to ensure optimum heat dissipation.

All foams used in the manufacturing process are produced in-house at Strandfoam Group and is completely stable, non-toxic and Hygienic.

The WEIGHTMASTER offers the benefit of dual sleeping surfaces for prolonged comfort and support.
